Its Cost. The direct cost of liquor to the people of these United States, is one about which we cannot calculate very closely, but it is very large. Green B. He is a cautious calculator and disposed to make it less, rather than more than the actual cost.

The New York Tribune which is not a temperance paper speaks of the cost to the consumer as follows: "A glass of beer costs the consumer five cents, and there are at least twenty in a gallon, and 640 in court and no criminal docket. The cheapest kind of liquor used, ordinary whiskey, is rarely sold at five cents, and averages at least seven cents a drink, at half a gill to the horn, this makes \$4.48 per gallon. The consumption last year was about 70,000-000 gallons; cost to the consumers about \$313,000,000. Adding wines, there is certainly spent for drink more than \$800,000,000, and the entire sum raised by taxes of all kinds, national, state, county, town, its population has been called a band city and school district, is stated on authority of the census bureau to be
